

Oral Health Factoids

Dental wisdom from
Delta Dental of Iowa

DID YOU KNOW?

- More than 120 signs and symptoms of disease can be diagnosed through a routine oral exam.¹
- For every \$1 invested in water fluoridation in the U.S., \$38 in dental costs are saved.²
- Among adults, more than 164 million work hours are lost each year because of dental problems.³

BRUSHING AND FLOSSING BASICS

- **Get Your Mouth in Order.** Flossing first — before you brush — loosens lodged particles, allowing fluoride in toothpaste to reach crevices between the teeth and gums.
- **Dental Care by the Numbers.** For floss — 18 inches is ideal. Toothpaste — a pea-sized dollop will do just fine. As for brushing time — a full two to three minutes, twice daily.
- **Toothbrushes Are Like Oil Changes.** Get a new one every three months or sooner if brush bristles are worn.

MAINTAINING A HEALTHY SMILE

Beyond just brushing and flossing, you can help protect your overall oral health in a number of ways.

- **Use Fluoride.** Drink fluoridated water and use fluoride toothpaste to protect against dental decay.

- **Avoid Tobacco.** In addition to the general health risks, smokers have seven times the risk of developing gum disease compared to non-smokers.
- **Limit Alcohol Intake.** Heavy use of alcohol poses a risk factor for oral and throat cancers.
- **Eat Wisely.** Avoiding sugars and starches when snacking applies to adults and children. Limit the number of snacks eaten throughout the day.
- **Visit the Dentist Regularly.** Check-ups can detect early signs of oral health problems and can lead to treatments that will prevent further damage and in some cases reverse the problem.
- **Watch Your Sugar.** When choosing a beverage, limit the amount of sugar by diluting sports drinks and juices with water. Also look for sugarfree gum with xylitol.
